Human

Novel stem cell growth factor like polypeptides and polymucleotides for identifying modulators useful for treating diseases such as Alzheimer's

```
The patent discloses novel stem cell growth factor-like proteins and polymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, embryonic stem cell, haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth factor-like proteins can replace as a graft for the bone marrow transplantation or cord blood transplantation for treating a variety of diseases such as immunodeficiency syndrome, agammaglobulinaemia, wiskott-Aldrich syndrome, agummaglobulinaemia, wiskott-Aldrich syndrome, agummaglobulinaemia, thalassaemia, haemolytic anaemia deto caryme defect, congenital anaemia such as sickle cell anaemia, Gaucher's disease, lysosomal storage diseases such as mucopolysactoharidosis, adrenal white matter diseases such as mucopolysactoharidosis, adrenal white matter care diseases and disorders such as Parkinson's disease, Alzheimer's disease and disorders such as severe combined immunodeficiency (SCID) and autoimmune pulmonary clubus sythematicus and disorders such as multiple sclerosis, systemic lupus sythematicus and disorders such as multiple sclerosis, systemic lupus sythematicus and disorders such as multiple sclerosis, systemic lupus sythematicus and disorders such as multiple sclerosis, systemic lupus sythematicus and disorders such as multiple sclerosis, systemic lupus sythematicus and the protein and autoimmune disorders such as multiple sclerosis, systemic lupus sythematicus and the protein and protein and protein and autoimmune disorders such as multiple sclerosis, systemic lupus sythematicus and the protein and pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               inflammation. Sequences of the invention are also useful in gene therapy. The present sequence is stem cell growth factor-like protein from human
cancer, rheumatoid arthritis, osteoporosis.
                                                                                                                                                                   Claim 28; Page 214-215; 232pp; English.

Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor cells.

Claim 23; Page 72-73; 96pp; English.

The invention relates to an isolated stem cell growth factor-like collypeptide (referred as supporting factor for proliferation of stem cells (SCR-1)) from mouse or human, or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth carried carcivaty. Also included are an isolated polymucleotide encoding SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the complement of the polymucleotide), an (expression) vector comprising the SCR-1 polymucleotide, a host cell genetically engineered to contain the SCR-1 polymucleotide in operative association with a regulatory sequence of the SCR-1 polymucleotide in operative association with a regulatory sequence of the SCR-1 polymucleotide in the host cell, that controls expression of the SCR-1 polymucleotide in the host cell, that controls expression of the SCR-1 polymucleotide with stem cell growth factor activity and activity to support proliferation or survival of haematopoletic stem cell arching any 10 consecutive as from Aboyatala, an isolated SCR-1 polymeptide with stem cell growth factor activity and lacking any 10 consecutive as from Aboyatala, an isolated belymucleotide attached to a surface, a strond resident of the SCR-1 polymeptide or unique segment of the SCR-1 polymeptide to emportain conjugation or comprising the SCR-1 polymeptide or unique segment of the SCR-1 polymucleotide attached to a surface, a strond cell genetically engineered to express the SCR-1 polymeptide to support proliferation or survival of a stem cell and an implant comprising a cell or germ cell or germ cell and an implant comprising a cell or germ cell and the stem cell or strond or a stem cell or parm cell and the SCR-1 polymeptide as useful for identifying a compound that binds to support proliferation or a stem cell, a germ cell, a germ cell, or stem cell or the comprising survival of a stem cell or stem cell or derm cell or permentant number or service or po transplantation. The transplantation of haematopoietic stem cells can be employed as a therapy for treating diseases such as chronic granulomatous diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia,

Wiskott-Aldrich syndrome, AIDS, etc., thalassaemia, haemolytic anaemia due to enzyme defect, congenital anaemia such as sicklaemia, Gaucher's disease etc. the SCR-1 polypeptide is useful for cell growth and morphogenesis, including tissue specific stem cell growth, epithelial morphogenesis, regulation, ovarian follicle development, promoting nerve cell growth, sustaining neuronal populations, cartilage remodeling, bone growth and immunosuppression. The present sequence is a Human SCR-1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ठ
                                                                                                                                   The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM89302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymerlectides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, infinibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    122

The patent discloses novel stem cell growth factor-like proteins and polymucleotides encoding them. Proteins of the invention are also known solymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SKT-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, embryonic stem cell, haematopoietic progenitor cell, historic cell, haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The proteins can replace as a graft for the bone marrow cell. action or cord blood transplantation for treating a variety of disease such as immunodeficiency syndrome, agammaglobulinaemia, wiskott-Aldrich syndrome, acquired immunodeficiency syndrome, agammaglobulinaemia, wiskott-Aldrich syndrome, acquired immunodeficiency syndrome (AIDS), wiskott-Aldrich syndrome, acquired immunodeficiency syndrome (AIDS), coch as sickle cell anaemia, Gaucher's disease, lysosomal storage deseneration, a variety of cancer and tumours. Proteins of the invention are useful for treating diseases such as severe combined immunodeficiency contenned and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as severe combined immunodeficiency avere compined in manuely contenned and the contenned as severe combined immunodeficiency averemic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  63 PPALERIGMKQIGVCLSSCPSGYYGTRYPDINKCTKCKADCDTCFNKNPCTKCKSGFYLH 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel stem cell growth factor like polypeptides and polymucleotides for identifying modulators useful for treating diseases such as Alzheimer's disease, cancer, rheumatoid arthritis, osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         inflammation. Sequences of the invention are also useful in gene therap.
The present sequence is stem cell growth factor-like protein from human

The patent discloses novel stem cell growth factor-like proteins and polynucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell or germ cell, pluripotent cell, paematopoietic stem cell, pluripotent cell, haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth factor-like proteins can replace as a graft for the bone marrow transplantation or cord blood transplantation for treating a variety of diseases such as immunodeficiency syndrome, chronic granulomations disease, duplicated immunodeficiency syndrome, chronic granulomation and sacket-Aldrich syndrome, acquired immune deficiency syndrome (AlbS), thalassaemia, haemolytic anaemia due to enzyme defect, congenital anaemia such as micopolysaccharidosis, adrenal white matter calculated cell for treating diseases such as mucopolysaccharidosis, adrenal white matter of the invention are useful for treating diseases such as severe comborytopaenia, immune deficiency congenic immune disease and other neurodegenerative diseases, thromborytopaenia, immune deficiency conservation are useful for treating diseases such as severe comborytopaenia, immune deficiency such as severe comborytopaenia, immune deficiency and disease and other neurodegenerative as severe comborytopaenia, immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      63 FFALERIGARQIGVCLSSCPSGYYGTRYPDINKCTKCKADCDTCFNKNFCTKCKSGFYLH 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                123 LGKCLDNCPEGLEANNHTMECVSIVHCEVSEWNPWSPCTKKGKTCGFKRGTETRVREIIQ 182

Human stem cell growth factor-like protein, SCR 1 #4.

```
The invention relates to new stem cell growth factor-like polypeptides and polynuclectides. The stem cell growth factor-like polypeptides and polynuclectides are useful for inducing differentiation of embryonic and adult stem cells to give rise to different cell types, for treating e.g. calesaes. They are also useful for generating new tissues and organs that can seful as hybridisation probes, oligomers or primers for PCR, for chromosome and gene mapping, in recombinantly producing protein, in candinantly producing protein, in candinantly producing protein, in candinantly producing protein, in companionantly companies and seaful for generating antibodies that specifically conditionant the polypeptide are useful for generating antibodies that specifically conditionant (e.g. protein or amino acid supplement, and as a carbon, nitrogen or carbohydrate source). Compositions comprising the current cor prevention of cancers, and other immunological disorders. The current sequence represents a human clone 1 throwbospondin protein
                                                                                                                                                                                                                                                                                                                                   New stem cell growth factor-like polypeptides and polynucleotides, use for treating e.g. leukemia, hemophilia and degenerative diseases like Alzheimer's disease, and for inducing immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 272;

The invention relates to an isolated stem cell growth factor-like colypeptide (referred as supporting factor for proliferation of stem cells (SCR-1)) from mouse or human, or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity. Also included are an isolated polyuncleotide encoding C SCR-1 (or its mature protein portion, or fragment, analogue, variant or complement of the polyuncleotide), an (expression) vector comprising the complement of the polyuncleotide), an (expression) vector comprising the SCR-1 polyuncleotide in operative association with a regulatory sequence that controls expression of the polyuncleotide in the host cell, that controls expression of the SCR-1 polymeleotide which is an expression product of the SCR-1 polymeleotide (the polypeptide having an expression product of the SCR-1 polymeleotide (the polypeptide having an expression of comprise the as ascquence appearing as ABO44433), an isolated SCR-1 polymeleotide with stem cell growth factor activity and sequence does not comprise the as sequence appearing as ABO44433), an isolated polypeptide

Tacking any 10 consecutive ass from ABO44430, an isolated polypeptide

Tacking any 10 consecutive ass from ABO44430, an isolated polypeptide

The stam cell growth factor activity having at least an as sequence

The polymeleotide to maintain survival of or promote proliferation of a stem 22. .272 /notes "Mature stem cell growth factor-like protein. This protein is specifically claimed in claim 9" Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor cells. Stem cell growth factor-like protein; antianemic; anti-HIV; SCR-1; immunostimulant; vulnerary; haematopoietic stem cell; gene therapy; supporting factor for proliferation of stem cells; wound healing; haematopoietic progenitor cell; stromal cell; AIDS; thalassaemia; bone marrow transplantation; cord blood transplantation; chronic granulomatous disease; duplicated immunodeficiency syndrome; agammaglobulinaemia; Wiskott-Aldrich syndrome; haemolytic anaemia; congenital anaemia; sicklaemia; Gaucher's disease; morphogenesis; epithelial cell growth; ovarian folliche development; nerve cell growth; cartilage remodeling; bone growth; immunosuppression; human. ```
ccell or germ cell, an anti-SCR l antibody, a nucleic acid array

C comprising the SCR-1 polynucleotide or a unique segment of the SCR-1

C polynucleotide attached to a surface, a stronal cell genetically

c engineered to express the SCR-1 polypeptide to support proliferation or

Survival of a stem cell or germ cell and an implant comprising a cell

c genetically engineered to express the SCR-1 polypeptide to support

C proliferation or survival of a stem cell. The SCR-1

polypeptide is useful for identifying a compound that binds to the SCR-1

polypeptide and for maintaining survival of or promoting proliferation of

c a stem cell, a germ cell, a haematopoietic stem cell or a haematopoietic

c progenitor cell. The SCR-1 polypeptide is useful for promoting wound

CC progenitor cell culture using the SCR-1 polypeptide can replace as a

CR graft for the conventional bone marrow transplantation or cord blood

CR transplantation. The transplantation of haematopoietic stem cells can be

cransplantation. The transplantation of haematopoietic stem cells can be

cransployed as a therapy for treating diseases such as chronic granulomatous

diseases, duplicated immunodeficiency syndrome, agarmaglobulinaemia,

cransplantation syndrome, AIDS, etc., thalassaemia, haemolytic anaemia

due to enzyme defect. congenital anaemia such as sicklaemia, Gaucher's

disease etc. the SCR-1 polypeptide is useful for cell growth and

cell growth, and regulation, ovarian follicle development, promoting nerve

cell growth, and regulation, ovarian follicle development, promoting nerve

cell growth, and immunosuppression. The present sequence is a Human SCR-1

The patent discloses novel stem cell growth factor-like proteins and polynucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, emrhance cell, germ cell, germ into stem cell, emrhance cell, paminodial or stem cell, paminodial or stem cell, paminodial or stem cell, paminodial or cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth catorilke proteins can replace as a graft for the bone marrow or transplantation or cord blood transplantation for treating a variety of diseases such as immunodeficiency syndrome, chronic granulomatous or disease, duplicated immunodeficiency syndrome, agammaglobulinaemia, wiskot-Aldrich syndrome, acquired immune deficiency syndrome (albeb), thalassaemia, haemolytic anaemia due to enzyme defect, congenital anaemia culs as sickle cell anaemia due to enzyme defect, congenital anaemia cliseases such as mucopolysaccharidosis, adrenal white matter degeneration, a variety of cancer and tumours. Proteins of the invention care useful for treating diseases such as Parkinson's disease, Alzheimer's deficiencies and disorders such as multiple sclerosis, alsease, Alzheimer's clisease and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune disorders such as multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune severe combined immune pulmonary inflammation. Sequence is human secreted protein from clone DA228_6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            182
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       122 LGKCLDNCPEGLEANNHTMECVSIVHCEVSEWNPWSPCTKKGKTCGFKRGTETRVREIIQ 181

Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor cells.

Disclosure; Fig 3; 96pp; English.

The invention relates to an isolated stem cell growth factor-like polypeptide (referred as supporting factor for proliferation of stem collypeptide (referred as supporting factor for proliferation of stem cells (SCR-1)) from mouse or human, or its mature protein portion, or carlains stem cell growth factor activity. Also included are an isolated polymuclectide encoding SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the SCR-1 polymuclectide, a bolymuclectide, and polymuclectide in operative association with a regulatory sequence SCR-1 polymuclectide, a polympeptide which is an expression product of the SCR-1 polymuclectide in the host cell, preparation of the SCR-1 polymuclectide in the host cell, that controls expression product of the SCR-1 polymuclectide in the host cell, contain the scrivity to support proliferation or survival of hasmatopoietic stem cell captured for supposition with a provise that C-terminal as a cativity to support proliferation or survival of hasmatopoietic stem cell captured factor activity having at least an as sequence of sequence does not comprise the as sequence appearing as ABO44433, and contains and supposition of stem cell or grown factor activity having at least an as sequence comprising the SCR-1 polymuclectide or a unique sequence or polympetide to maintain survival of or promote proliferation or survival, of a stem cell and an isolated polypeptide to support proliferation or survival of a stem cell or germ cell and an implant comprising a cell comprise the scription or sequenced to express the SCR-1 polympetide to support proliferation or survival of a stem cell or germ cell and an implant comprising a cup or promoting proliferation or survival of a stem cell or germ cell or germ cell and an an expension of a stem cell, a germ cell, a paem cell, a hasmatopoietic stem cell or promoting proliferation or survival of a stem cell, a stem cell or germ cell or promoting proliferation or survival o

ö healing. The human haematopoietic stem cell or human haematopoietic progenitor cell culture using the SCR-1 polypeptide can replace as a graft for the conventional bone marrow transplantation or cord blood transplantation. The transplantation of haematopoietic stem cells can be employed as a thorapy for treating diseases such as chronic granulomatous diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia, wiskott-Aldrich syndrome, AIDS, etc., thalassaemia, haemolytic anaemia due to enzyme defect, congenital anaemia such as sicklaemia, Gaucher's disease etc. the SCR-1 polypeptide is useful for cell growth and morphogenesis, including tissue specific stem cell growth, epithelial cell growth, sustaining neuronal populations, cartilage remodeling, bone prowth and immunosuppression. The present sequence is a protein homologous to Human SCR-1 protein HPSAKGNICPPTNETRKCTVQRKKCQKGERGKKGRERKRKKPNKGESKEAIPDSKSLESS 242 241 62 FPALERIGHKOIGVCLSSCPSGYYGTRYPDINKCTXCKADCDTCFNKNFCTKCKSGFYLH 121 LGKCLDNCPEGLEANNHTMECVSIVHCEVSEWNPWSPCTKKGKTCGFKRGTETRVREIIQ 182 61 HLRLISWLF11LNFWEYIGSQNASRGRRQRRWHPNVSQGCQGGCATCSDYNGCLSCKPRL PPALERIGMKQIGVCLSSCPSGYYGTRYPDINKCTKCKADCDTCPNKNPCTKCKSGPYLH 0; Gaps Clone, secreted protein, protein factor; cytokine, lymphokine; interferon, colony stimulating factor; CSF; interleukin; cloning; tumour invasion; tumour suppression; immune boosting. The nucleotide sequence (NS) of the full-length protein-coding sequence of clones ci254 (AAV831312, da2286 (AAV83133), du4105 (AAV83134), eh801 (AAV83135), er3691 (AAV83136), fh1235 (AAV83137), fm601 (AAV83138) or fr4732 (AAV83139), (all clones are deposited as ATCC 98415) and the proteins they encode are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals for example, tumour suppression/invasion activity, immune system boosting activity. The polynucleotides are also believed to be useful for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; stem cell growth factor-like protein; antiinflammatory; nootropic; neuroprotective; vulnerary; cytostatic; anticonvulsant; immunostimulant; ostaotropic; viruotde; dermatological; tranquilliser; cerebroprotective; osteopathic; immunodeficiency syndrome; chronic granulomatous disease; duplicated immunodeficiency syndrome; ejammaglobulnaemia; thalassaemia; dauplicated immunodeficiency syndrome; syammaglobulnaemia; thalassaemia; daucher's disease; lysosomal storage disease; mucopolysaccharidosis; adrenal white matter degeneration; anaemia; neurodegenerative disease; Parkinson's disease; Alzheimer's disease; thrombocytopaemia; SCID; servere combined immunodeficiency; immune disorder; antoimmune disorder; multiple sclerosis; systemic lupus erythematosus; rheumatoid arthritis; autoimmune pulmonary inflammation; cancer; tumour; gene therapy; SCR-1; supporting factor for the proliferation of stem cell.

The patent discloses novel stem cell growth factor-like proteins and polymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, or germ cell, germ line stem cell, embryonic stem cell, parabolatic stem cell, parabolatic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth cell. The haematopoietic progenitor cell cultured using stem cell growth cell. The haematopoietic progenitor cell cultured using stem cell growth catorine proteins can replace as a graft for the bone marrow crowt blood transplantation for treating a variety of disease such as immunodeficiency syndrome, chronic granulomatous wiskott-Aldrich syndrome, acquired immune deficiency syndrome (AIDS), thalassaemia, haemolytic anaemia due to enzyme defect, congenital anaemia such as mich cell anaemia due to enzyme defect, congenital anaemia desentation, a variety of cancer and tumours. Proteins of the invention care useful for treating diseases such as Parkinson's disease, Alzheimer's defenciencies and other neurodegenerative condenders condenders continued immune deficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 63 PPALERIGHKOIGVCLSSCPSGYYGTRYPDINKCTKCKADCDTCPNKONPCTKCKSGFYLH 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       123 LGKCLDNCPEGLEANNHTWECVSIVHCEVSEWNPWSPCTKKGKTCGFKRGTETRVREIIQ 182

WPI; 2003-381616/36 ABR62114; 63 rang YT; RESULT 1: 888888888888888 ð 셤 8 윤 셤 ð 셤 à ò The invention relates to human secreted or transmembrane protein (I), their fragments and is encoded by specific complementary decyribonucleic acid (cDNA) inserts (II), where the protein is substantially free from other mammalian proteins. (I) are useful for preventing, treating or prevention of tumours. (I) exhibits activity relating to angiogenesis, cytokine, cell proliferation, cell differentiation, antinflammatory, stem cell growth factor activity and activin or inhibin-related crytokine. (I) can be used to manipulate stem cells in culture to give crise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental damage or cells damaged by illness, autoimmune disease, accidental damage or cells damaged by illness, between the proliferation of neural cells and central and peripheral nervous system diseases and neuropathies, such as a practimer's, Parkinson's disease, Huntington's disease, amycrophic central and peripheral nervous system diseases and neuropathies.

XI zheimer's, Parkinson's disease, Huntington's disease, amycrophic atteral sclerosis. (I) is involved in chemotactic or chemokinetic activity, regulation of haamatopolesis and is useful for treating myeloid or lymphoid cell disorders, platelet disorders such as thrombocytopaenia Human; cytostatic; antirheumatic; antiarthritic; vulnerary; analgesic; antiinflammatory; antibacterial; immunosuppressive; antiparkinsonian; neuropyrotective; nootropic; osteopathic; haemostatic; vasotropic; antiulocer; fungicide; antidibactic; antiasthmatic; antiallergic; immunostimulant; antiparasitic; secreted protein; transmembrane protein; cytokine; cell proliferation; cell differentiation; autoimmune disease; stem cell; growth factor; nervous system disease; neuropathy; Alzheimer's disease; Parkinson's disease; Huntington's disease; osteoporosis; severe combined immunodeficiency; SCID; infection; multiple sclerosis; rheumatoid arthritis; gene therapy. Novel secreted or transmembrane protein and polynucleotide encoding the protein, useful for diagnosis and treatment of neurological disorders, cancer, autoimmune diseases, bone disorders and lung or liver fibrosis. Evans C; Collins-Racie LA, Claim 207; Page 203-204; 284pp; English 242 KEIPEQRENKQQQKKRKVQDKQKS 265 Lavallie ER, C ABP61846 standard; protein; 292 Human polypeptide SEQ ID NO 200 22-DEC-2000; 2000US-00745763. 98US-00040963 MCCOY J M. and for regeneration of bone, cartilage, tendon, ligament and/or nervetissue growth and in tissue repair, healing of burns, incisions, ulcers, for treating osteoprosis, osteoarthritis, bone degenerative disorders or periodontal disease. (1) is also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis, rheumatoid arthritis, diabetes mellitus, myasthenia gravis, allergic reactions and conditions, such as asthma or other respiratory problems. (II) is useful to express recombinant protein, as markers for tissues in which the corresponding protein is preferentially expressed and in gene therapy. The present sequence is that of a polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             242

The wastern cell growth factor-like polypeptides and polymucleotides, useful for treating e.g. leukemia, hemophilia and degenerative diseases like Alzheimer's disease, and for inducing immune response.

XX XX

Disclosure; Fig 2; 151pp; English.

XX The invention relates to new stem cell growth factor-like polypeptides and polymucleotides. The stem cell growth factor-like polypeptides and polymucleotides are useful for inducing differentiation of embryonic and adult stem cells to give rise to different cell types, for treating e.g. CC dult stem cells to give rise to differentiation of embryonic and adult stem cells to give rise to differentiation of embryonic and adult stem cells to give rise to differentiation of embryonic and adult stem cells to give rise to differentiation of embryonic and in the Alzheimer's consecution and degenerating new tissues and organs that consecution and gene mapping, in recombinantly producing protein, in generating antisense DNA or RNA, in diagnostics as expressed sequence consequence and the polypeptides are useful for generating antibodies that specifically bind the polypeptides are useful for generating antibodies that specifically complypeptides are useful for generating antibodies that specifically contropen or carbohydrate source). Compositions comprising the corporation of cancers, and other immunological disorders. The current corporate source in complement, and as a carbon, corporation of cancers, and other immunological disorders. The current corporation of cancers, and other immunological disorders. The current corporations of polypeptides are useful clone da_288_6

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2, A

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 1
T43251
furin (BC 3.4.21.75) - fall armyworm
N'Alternate names: paired basic amino acid cleaving enzyme; proprotein convertase; serin
C.Species: Spodoptera frugiperda (fall armyworm)
C;Date: 11-Jan-2000 #sequence revision 11-Jan-2000 #text change 11-Jan-2000
C,Accession: T43251
R; Cieplik, M.; Klenk, H.
submitted to the EMBL Data Library, January 1996
A; Description: Cloning and functional characterization of FURIN from Spodoptera frugiper
A;Reference number: Z22368
A; Accession: T43251
A;Status: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: mRNA
A; Residues: 1-1299 < CIB>
A; Cross-references: EMBL: Z68888; NID: 91167859; PID: e219690; PIDN: CAA93116.1
A;Experimental source: clone Sfurin 6; ovary
C; Function:
A; Description: responsible for the endoproteolytic processing of proproteins with specif:
C; Keywords: hydrolase; serine proteinase

"Murine subtilisin-like proteinase SPC6 is expressed during embryonic implantation, somitogenesis, and skeletal formation.";

Dev. Genet. 21,75-81(1997).

-!- FUNCTION: Likely to represent a widespread endoprotease activity within the constitutive and regulated secretory pathway. Capable of cleavage at the RX(K/R)R consensus motif. May be responsible for the maturation of gastrointestinal peptides. May be involved in the cellular proliferation of adrenal cortex via the activation of growth factors.

-!- CATALYTIC ACTIVITY: Release of mature proteins from their proproteins by cleavage of Arg-Xaa-Yaa-ARG-|-Zaa bonds, where Xaa can be any amino acid and Yaa is Arg or Lys.

-!- SUBCELLULAR LOCATION: PC5A IS SECRETED THROUGH THE REGULATED SECRETORY PATHWAY. PC5B IS A TYPE I MEMBRANE PROTEIN LOCALIZED TO A PARANUCLEAR POST-GOLGI NETWORK COMPARTMENT IN COMMUNICATION WITH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EWBL outstation the Buropean Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DOMAIN: AC 1 and AC 2 (clusters of acidic amino acids) contain sorting information. AC 1 directs TGN localization and interacts with the TGN sorting protein PACS-1.
SIMILARITY: Belongs to peptidase family S8.
SIMILARITY: Contains 1 homo B/P domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Bvent=Alternative splicing; Named isoforms=2;
Comment=Additional isoforms seem to exist;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MGD; MGI:97515; Pcsk5.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STRAIN-Berkeley
```

CATALYTIC ACTIVITY: Release of mature proteins from their proproteins by cleavage of Arg-Kaa-Yaa-Arg-1-Zaa bonds, where Xaa can be any amino acid and Yaa is Arg or Lys. Releases albumin, complement component C3 and von Willebrand factor from their

respective precursors. TISSUE SPECIFICITY: Transient expression in a subset of central

!

nervous system neurons during embryonic stages 12-13. Expression in developing tracheal tree from stage 13 to end of embryonic
                        development.
--- DEVELOPMENTAL STAGE: Expressed both maternally and zygotically.
--- SIMILARITY: Belongs to peptidase family S8. Purin subfamily.

I exists only as a monomer, suggesting that propeptide cleavage affects its tertiary or quaternary structure. SUBCELLULAR LOCATION: PACB4A.1 and PACB4-All are secreted. PACB4C and PACB4CS are not secreted and remain probably in zymogen form in endoplasmic reticulum. PACB4E.1 and PACB4E.1 are retained transcollularly probably through a hydrophobic cluster in their C-terminus. PACB4E might be secreted.

TISSIGE SPECIPICITY: Rach PACE4-isoform exhibits a unique
placenta, lung, skeletal muscle, kidney, pancreas, but at
comparatively higher levels in the liver. PACE4A-II is at least
expressed in placenta. PACE4B was only found in the embryonic
expressed in placenta. PACE4B was isolated. PACE4C and PACE4D
expressed in placenta. PACE4B-II is expressed in cerebellum,
placenta and pituitary. PACE4B-II is at least present in
                                                                                                                                                                                           -1- DOWAIN: The propeptide domain acts as an intramolecular chaperone assisting the folding of the zymogen within the endoplasmic reticulum. Isoform PACR4D lacks the propeptide domain.
-1- SIMILARITY: Belongs to peptidase family S8.
-1- SIMILARITY: Contains 1 PLAC domain.

Dev. Biol. 181:268-283(1997).

-I- FUNCTION: Likely to represent a widespread endoprotease activity

-i- FUNCTION: Likely to represent a widespread endoprotease activity

within the constitutive and regulated secretory pathway. Capable

of cleavage at the RX(K/R)R consensus motif. May be responsible

for the maturation of gastrointestinal peptides. May be involved

in the callular proliferation of adrenal cortex via the activation

of growth factors.

-i- CATALYTIC ACTIVITY: Release of mature proteins from their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            and peripheral tissues of

proproteins by cleavage of Arg-Xaa-Yaa-ARG-|-Zaa bonds, where Xaa can be any amino acid and Yaa is Arg or Lys.
SUBCELLULAR LOCATION: PC5A IS SECRETED THROUGH THE REGULATED SECRETORY PATHWAY. PC5B IS A TYPE I MEMBRANE PROTEIN LOCALIZED TO A PARANUCLEAR POST-GOLGI NETWORK COMPARTMENT IN COMMUNICATION WITH EARLY ENDOSOMES (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DOMAIN: The propeptide domain acts as an intramolecular chaperone assisting the folding of the zymogen within the endoplasmic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -!- DOMAIN: AC 1 and AC 2 (clusters of acidic amino acids) contain sorting information. AC 1 directs TGN localization and interacts with the TGN sorting protein PACS-1.
-!- SIMILARITY: Belongs to peptidase family S8.
-!- SIMILARITY: Contains 1 homo B/P domain.
